Subject: RE: Proposed NC 2L for Thallium
Attachments: image001.jpg

Mike,

The proposed standard for thallium is 0.23 µg/L. Even if this standard is not approved, any approved standard has to be at or below the MCL which is 2 µg/L. The detections at issue for thallium at the site are also above 2 µg/L and thus would be in violation of any approved 2L standard. Since the proposed standard is not approved yet, there is no place it can be viewed yet. Let me know if you have any additional questions.

Ginny,

You mention in the letter for the APAC Castle Hayne site the proposed NC 2L for Thallium. Can you provide the proposed standard and where to find it?

Mike Burns
